Fund manager's report

Source : Groupama AM

July 2025 was a month of rare intensity on the macroeconomic and geopolitical fronts, marked by a sudden rise in trade protectionism initiated by the United States, against a backdrop of continued caution among central banks and broadly resilient economic data. The top story of the month was undoubtedly the Trump administration's aggressive shift in trade policy. Following an ultimatum set for 1 August, the United States formalised a wide-ranging set of tariff measures. Several bilateral agreements were signed, including one with Japan imposing "reciprocal" tariffs of 15%, giving Tokyo a competitive advantage over other car exporters. A compromise was reached with the European Union on general tariffs of 15%, slightly above the ECB's reference scenarios. Although no retaliatory measures are planned on the European side, these new barriers are nevertheless likely to weigh on certain export sectors. Other partners such as India, Canada and Switzerland were targeted more heavily, with tariff increases of between 25% and 39%. On the monetary policy front, the Federal Reserve kept rates unchanged for the fifth consecutive meeting, in the 4.25-4.50% range. While the statement was unchanged – a resolutely data-dependent approach - the tone softened significantly internally, with two FOMC members voting in favour of an immediate rate cut. The disappointing jobs report (+73k jobs created) now points to a high probability of a cut in October, which is already more than 80% priced into the market. The Fed is also facing increasing political pressure, although Jerome Powell's chairmanship appears to be stabilising after initial criticism from the White House. In the Eurozone, the ECB also maintained the status quo, as expected. Headline inflation remained stable at 2.0% YoY in July, while core inflation came in at 2.3%, on the back of slowing service prices and a slight uptick in goods prices. The latest PMIs confirmed a gradual improvement in activity, with the composite index at 51, its highest level in 11 months. However, this renewed momentum remains uneven: while Spain pulled the overall index higher, Germany remains under pressure and France is struggling to return to sustained growth. The scenario of a final 25bp rate cut in September remains on the cards, although an extension of the monetary pause is becoming credible given the trend in prices. The bond market logically reflected this monetary repositioning. US 10-year yields rose sharply in July (+15bp to 4.37%), in response to a higher-than-expected CPI and a sharp rise in Q2 GDP to +3% annualised. In Europe, tariff tensions put pressure on longterm yields (+9 bp on the Bund to 2.70%, +6 bp on the OAT to 3.35%), while the short-term segment remained stable in anticipation of a cut in September. Credit spreads proved remarkably resilient. Risk appetite remains buoyant on the prospect of likely monetary stimulus, broadly contained inflation and solid corporate earnings. In the money market, issuer spreads remained stable. The Ester remained at around 1.92%, while the 3-month Euribor edged up 4bp to 2%. We maintained our variable rate strategy with extension of the WAL.

Key ESG performance indicators

	Fund coverage ratio(*)	Fund	Univers e
Board Gender Diversity	98%	40%	32%

(*) The coverage ratio is the percentage of stocks that contribute to the ESG indicator score For definitions of ESG performance indicators, please refer to the last page of the document.

Portfolio ESG score

Α	В	C	D	Е

	Fund	Universe
Overall ESG score	65	63
Coverage rate	94%	100%

Score for E, S and G factors

	Fund	Universe
Environment	47	64
Social	68	62
Governance	58	62

Levels A B C D E refer to the five equal portions (quintiles) into which the universe is divided, with A being the best score and E the worst.

ESG performance indicators definition

Carbon intensity

The carbon intensity is the weighted average greenhouse gas (GHG) emissions per million euros of revenue. Scope 1, 2 and 3 emissions are taken into account.

Scope 1 and 2 correspond to emissions directly emitted by the company and those indirectly linked to its energy consumption. Scope 3 emissions are those emitted by the company's suppliers and those emitted during the use and end of life of the products it

Green Part

The green share is the percentage of a company's revenue devoted to economic activities that contribute positively to energy and ecological transition.

Source: Clarity AI, Groupama AM calculations

Implied temperature

Implied temperature is the difference between a company's projected carbon intensity trajectory and the reference trajectory of a climate scenario compatible with the Paris Agreements.
