Fund manager's report

Source : Groupama AM

A more accommodative stance by central banks, renewed fiscal discipline in the UK and a sharp fall in European gas prices in technically oversold markets facilitated a sharp rebound in October. Your fund also rose but by less than its benchmark, underperforming the latter.

October saw many companies release their quarterly results. Among them, BE Semiconductor Industries (semiconductor industry equipment supplier, +16.0%) did not disappoint, despite a deteriorating economic environment. The company impressed with its ability to maintain a high gross margin (62.3%) despite the cyclical decline in its sales (-19% year-on-year and -21% compared to the previous quarter). Above all, the company was even more optimistic than in the past about the long-term potential of its Hybrid Bonding technology, particularly for the smartphone market.

Brunello Cucinelli (luxury clothing, +17.2%) also performed very well once again. The company has revised its 2022 turnover growth target to +25%. This target had already been revised from +10% to +15% a few months ago. Brunello Cucinelli is benefiting fully from its premium positioning, the quality of its offer and its investments to produce in larger volumes, even if demand for its products remains higher than supply.

The publication of ASM International (equipment for the semiconductor industry, -3.8%) was not well received. It is true that the company used to surprise positively, but this time it indicated that 40% of its sales to China (16% of turnover) could be affected by the new American sanctions. These figures are higher than analysts had anticipated but they do not call into question the group's dynamic, still well positioned to grow significantly faster than the market thanks to its technological lead.

Temenos (software for banks and financial services, -13.7%) saw its third quarter penalised by a sharp downturn in the economy and internal organisational problems. The company has since replaced some key personnel. It still enjoys a strong leadership position in a solid market and its evolution towards a business model offering more visibility is in our view positive in the medium term.

ESG performance indicators definition

Carbon intensity

The carbon intensity is the weighted average greenhouse gas (GHG) emissions per million euros of revenue. Scope 1, 2 and 3 emissions are taken into account.

Scope 1 and 2 correspond to emissions directly emitted by the company and those indirectly linked to its energy consumption. Scope 3 emissions are those emitted by the company's suppliers and those emitted during the use and end of life of the products it creates.

Green Part

The green share is the percentage of a company's revenue devoted to economic activities that contribute positively to energy and ecological transition.

Source: Iceberg Data Lab, Groupama AM calculations

Implied temperature

Implied temperature is the difference between a company's projected carbon intensity trajectory and the reference trajectory of a climate scenario compatible with the Paris Agreements.
