Fund manager's report

Source : Groupama AM

Equity markets generally fell back in December, driven in particular by renewed fears of rate hikes by the world's main central banks. In a difficult environment for growth stocks and with little news on the corporate front, your fund fell by a similar amount to its benchmark.

Brunello Cucinelli (luxury clothing, +9.9%) was the best performer in the portfolio, as the company raised its guidance for the third time this year. Sales are now expected to rise by 28% in 2022 (compared to the previous forecast of 25%). The very strong order intake for the spring-summer season also augurs well for 2023. Management now expects sales to grow by around 12%, compared with the previous forecast of 10%. In our opinion, the company, which is still relatively unknown in Asia and the United States, should continue to develop steadily over the medium and long term.

Soitec (semiconductor materials, -0.5%) also reported good news, with the signing of a strategic partnership with STMicroelectronics for SmartSIC, Soitec's silicon carbide technology. Silicon carbide is a material that enables high performance gains in the field of power electronics, particularly for electric vehicles. This agreement is an important validation of the added value of SmartSIC compared to traditional silicon carbide by one of the major players in the sector (\$700m of turnover expected in this field in 2022).

Despite very good results for its financial year to the end of September, Carl Zeiss Meditec (solutions for eye and brain surgery, -8.7%) declined significantly. Sales of €1.91bn and EBIT of €397m (20.6% margin) were significantly better than expected. However, the 2022-23 financial year is expected to be less successful, hampered in particular by excess inventory in China and by a reduction in reimbursements in Korea for certain product categories.

Other major declines included semiconductor stocks, handicapped by recession fears and bad news from US player Micron, with declines in ASM International (equipment for the semiconductor industry, -9%), BE Semiconductors (equipment for the semiconductor industry, -6.5%) and Melexis (semiconductors for the automotive industry, -2.1%).

ESG performance indicators definition

Carbon intensity

The carbon intensity is the weighted average greenhouse gas (GHG) emissions per million euros of revenue. Scope 1, 2 and 3 emissions are taken into account.

Scope 1 and 2 correspond to emissions directly emitted by the company and those indirectly linked to its energy consumption. Scope 3 emissions are those emitted by the company's suppliers and those emitted during the use and end of life of the products it creates.

Green Part

The green share is the percentage of a company's revenue devoted to economic activities that contribute positively to energy and ecological transition.

Source: Iceberg Data Lab, Groupama AM calculations

Implied temperature

Implied temperature is the difference between a company's projected carbon intensity trajectory and the reference trajectory of a climate scenario compatible with the Paris Agreements.

Net job creation

Average percentage of growth in number of employees over one year.

Source: Moody's ESG, Groupama AM calculations.

Training hours

Average number of training hours per employee per year.

Source : Vigeo Eiris, Groupama AM calculations.

Human rights policy

Proportion of portfolio made up of companies that have implemented a human rights policy.

Source : Moody's ESG, Groupama AM calculations.

Independence of directors

Proportion of portfolio made up of companies in which independent directors form a majority on the Board of Directors or Supervisory Board.
