# GROUPAMA FUTURE FOR GENERATIONS BALANCED NC

Sub-fund of a French SICAV

**September 2026**

Data as of 30/09/2026

The investment management objective is to generate medium-term capital growth over the recommended investment period of more than 3 years. To achieve this, the portfolio manager may invest, through active and discretionary management, mainly in equities and bonds of international companies involved in the energy transition, environmental impact, sustainable consumption and the improvement of living conditions.This product has a sustainable investment objective.

## Fund manager's report

*Source : Groupama AM*

Markets over the period: September was characterised by mixed performances across the world's major equity markets. The MSCI World rose by +1.05% in euros, while in local currencies, the S&P 500 fell by -0.45%, the Nasdaq Composite rose by +1.86%, the MSCI Asia ex-Japan fell by -0.59%, the Nikkei 225 rose by +0.67% and the Stoxx Europe 600 fell by -2.67%. From a macroeconomic perspective, the energy shock reignited inflationary pressures without undermining the growth momentum, prompting the major central banks to continue their monetary tightening. The ECB hiked its deposit rate by 25 basis points to 2.50%, while the US Federal Reserve raised its Fed Funds target range to 3.75%-4.00%, while maintaining a clearly hawkish stance. The Bank of Japan, in turn, also hiked its rates by 25 basis points to 1.25%, their highest level since 1995, while the Bank of England kept its key rate unchanged at 3.75%, despite three members voting in favour of another hike. Business indicators nevertheless remained strong. The Eurozone's composite PMI came in at 53.1, its highest level since April 2023, while the US figure surged to 58.4, its highest level in more than five years. This combination of resilient growth and persistent inflation heightened expectations of persistently high interest rates, weighing on financial asset valuations. In terms of commodities, the monetary situation continued to impact gold, which fell by 6.3% over the month. In contrast, Brent crude rose sharply (+17%) to end the month at $91 per barrel. In the forex market, the euro depreciated sharply against the US dollar (-2.5%) and ended the month at USD 1.13. Against this backdrop, the tech, communications services and healthcare sectors were among the main contributors to market performance, while real estate and consumer discretionary were the biggest underperformers.

Allocation: We maintain a diversified allocation with a bias towards equities. Despite the rise in interest rates, we believe that the risk-return profile remains more attractive for equities, whose performance will likely continue to be driven by earnings growth and the AI investment cycle.

Equities segment: The equities portfolio underperformed its benchmark over the period. This underperformance was mainly due to the stock-picking effect, while the allocation effect remained positive. Among the main negative contributors to relative performance was Meta, whose share price rose sharply following the enthusiastic response to its personal AI assistant, Muse. The lack of exposure to the energy sector and the absence of AMD in the portfolio also had a negative impact on relative performance. In contrast, our convictions in ING, KLA, Micron, Prysmian and Thermo Fisher Scientific contributed positively to the portfolio's performance. During the month, we sold our position in Lundin Mining and took a new position in Teck Resources, another major copper producer. The company is continuing its strategic shift towards this business and is set to benefit from significant cost synergies generated by its merger, with the assets acquired from Anglo American. We also reduced our exposure to Wheaton Precious Metals in favour of Broadcom, whose growth prospects, highlighted in the latest quarterly earnings report, are particularly attractive in our view. Lastly, we sold our position in Regeneron and took partial profits on Thermo Fisher Scientific following the share's recent performance. In contrast, we increased our position in Argenx, whose growth profile remains highly attractive in the medium term.

Credit segment: Credit portfolio: September was the second-worst month of the year for credit, after March. Spreads widened by just over 10bp, but the rise in sovereign yields accounted for more than 75% of the market's negative performance. The credit segment underperformed its benchmark over the period, with the telecoms and utilities sectors dragging down performance, while the consumer sectors (cyclical and non-cyclical) made a positive contribution. Carry assets (high-yield diversification and subordinated bonds) also underperformed. The primary market remained active, with higher discounts. We took part in the Bureau Veritas issue. Its credit profile continues to improve thanks to better-than-expected growth, upgraded guidance, strong cash generation and a shift towards more resilient, higher-margin business lines (data centres, infrastructure, cyber security), which is improving visibility on future cash flows.

## ESG performance indicators definition

### Carbon intensity

Carbon intensity corresponds to the weighted average of greenhouse gas (GHG) emissions per million euro of turnover of the issuers invested in.
Scope 1, 2 and 3 upstream emissions are taken into account.
Scope 1 emissions correspond to emissions directly emitted by the company, while scope 2 emissions correspond to indirect emissions linked to its energy consumption. Upstream scope 3 emissions are all other indirect emissions generated upstream of the production activity.
