Fund manager's report

Source : Groupama AM

The global economic climate was dominated by monetary tightening and fiscal pressures in September. In the US, the Fed hiked its key rate by 25bp to 4%, prompted by a robust labour market (162,000 jobs created in August, with September's figures due tomorrow) and a solid composite PMI of 58.4; Core PCE came in lower than expected at 3.0% YoY (0.2% QoQ). Against this backdrop, the 10-year US Treasury yield rose above 5% for the first time since 2007, ending the month just below 5.30%, while the 30-year yield returned to its 2002 levels, ending the month at around 5.65%. In the Eurozone, the ECB kept its rates unchanged (deposit rate at 2.50%) despite projected inflation of 3.0% for 2026, driven by rising energy prices which pushed Brent crude above $108 per barrel, before falling back towards the end of the month. Eurozone GDP growth came in higher than the ECB staff's June forecasts (0.1% excluding Ireland expected by the ECB vs. 0.3%). September's PMI confirmed an acceleration in economic activity in the Eurozone. The final Eurozone CPI averaged 3.25% in August, compared with +3.26% in the preliminary reading and up from +2.94% in July. High energy prices, resilient macroeconomic figures and the ECB's hawkish repricing pushed yields higher, a trend increasingly reinforced by rising global real rates and term premiums. The Bund rose above 3.60%, while the 10-year OAT hit 4.87% at the end of the month, its highest level since March 2022. France remains the main idiosyncratic weak spot, with the 10-year OAT-Bund spread widening further to nearly 130bp. In the UK, the Bank of England kept its rate at 3.75% amid persistent inflation. The credit market remained broadly resilient in September despite the sharp rise in sovereign yields. Spreads widened slightly, with most of the drop in performance driven by the interest rate component rather than a deterioration in fundamentals. Financials and short- to medium-term maturities were more resilient, while real estate and long-term segments were hit harder. The money market saw very low volatility, and issuance levels were virtually unchanged. The Ester rose from 2.19 to 2.44, reflecting the ECB's 25bp rate hike, while the 3-month Euribor remained virtually stable, with a 2.5bp widening over the month.

ESG performance indicators definition

Carbon intensity

Carbon intensity corresponds to the weighted average of greenhouse gas (GHG) emissions per million euro of turnover of the issuers invested in.
Scope 1, 2 and 3 upstream emissions are taken into account.
Scope 1 emissions correspond to emissions directly emitted by the company, while scope 2 emissions correspond to indirect emissions linked to its energy consumption. Upstream scope 3 emissions are all other indirect emissions generated upstream of the production activity.
