Fund manager's report

Source : Groupama AM

September was characterised by mixed performances across the world's major equity markets. The MSCI World rose by +1.05% in euros, while in local currencies, the S&P 500 fell by -0.45%, the Nasdaq Composite rose by +1.86%, the MSCI Asia ex-Japan fell by -0.59%, the Nikkei 225 rose by +0.67% and the Stoxx Europe 600 fell by -2.67%. From a macroeconomic perspective, the energy shock reignited inflationary pressures without undermining the growth momentum, prompting the major central banks to continue their monetary tightening. The ECB hiked its deposit rate by 25 basis points to 2.50%, while the US Federal Reserve raised its Fed Funds target range to 3.75%-4.00%, while maintaining a clearly hawkish stance. The Bank of Japan, in turn, also hiked its rates by 25 basis points to 1.25%, their highest level since 1995, while the Bank of England kept its key rate unchanged at 3.75%, despite three members voting in favour of another hike. Business indicators nevertheless remained strong. The Eurozone's composite PMI came in at 53.1, its highest level since April 2023, while the US figure surged to 58.4, its highest level in more than five years. This combination of resilient growth and persistent inflation heightened expectations of persistently high interest rates, weighing on financial asset valuations. In terms of commodities, the monetary situation continued to impact gold, which fell by 6.3% over the month. In contrast, Brent crude rose sharply (+17%) to end the month at $91 per barrel. In the forex market, the euro depreciated sharply against the US dollar (-2.5%) and ended the month at USD 1.13. Against this backdrop, the tech, communications services and healthcare sectors were among the main contributors to market performance, while real estate and consumer discretionary were the biggest underperformers. The portfolio, meanwhile, slightly underperformed its benchmark. The stock-picking effect accounted for the bulk of this underperformance, while the allocation effect was positive. Among the main negative contributors were RTX and our underweighting of Meta, whose share price rose sharply following the favourable reception given to its personal AI assistant, Muse. The absence of AMD from the portfolio also had a negative impact on relative performance. In contrast, our convictions in Micron, Thermo Fisher Scientific, ASML and Palo Alto Networks provided some support for the portfolio's performance. During the month, we trimmed part of our position in Agnico Eagle in favour of Broadcom, in light of the particularly attractive growth prospects highlighted in its quarterly earnings release.

ESG performance indicators definition

Carbon intensity

Carbon intensity corresponds to the weighted average of greenhouse gas (GHG) emissions per million euro of turnover of the issuers invested in.
Scope 1, 2 and 3 upstream emissions are taken into account.
Scope 1 emissions correspond to emissions directly emitted by the company, while scope 2 emissions correspond to indirect emissions linked to its energy consumption. Upstream scope 3 emissions are all other indirect emissions generated upstream of the production activity.
