

GROUPAMA FUTURE FOR GENERATIONS BALANCED IC

Sub-fund of a French SICAV

April 2026

Data as of

30/04/2026

The investment management objective is to generate medium-term capital growth over the recommended investment period of more than 3 years. To achieve this, the portfolio manager may invest, through active and discretionary management, mainly in equities and bonds of international companies involved in the energy transition, environmental impact, sustainable consumption and the improvement of living conditions. This product has a sustainable investment objective.

Fund manager's report

Source : Groupama AM

Markets over the period: April was marked by a strong rally driven by risk appetite in equity markets. Investors looked past geopolitical concerns to focus on a surprisingly robust Q1 earnings season, particularly in the technology sector, driven by AI (S&P 500 +10.5%, Nasdaq +15.3%, Russell 2000 +12.3%, Eurostoxx 50 +6.4%, Stoxx 600 +5.4%, Nikkei +16.1%, MSCI Asia ex-Japan +16.3%). The US 10-year yield stayed high, ending the month at around 4.4%, as did the German Bund at 3%, with both hovering near their highs. Credit spreads tightened sharply, with the X-over ending at 292bp (compared with 353bp last month). Brent crude remained at a high level of \$114 per barrel. Gold was relatively stable in April, settling at \$4,617, while the US dollar depreciated to 1.17 (compared with 1.15 last month). Allocation: We shifted to a more positive tilt on equities, in terms of asset allocation, following the rise in the markets during April. We are maintaining this bias following the very strong start to the US corporate earnings season. The much stronger-than-expected earnings growth in the first quarter highlights the powerful drivers currently at play (digitalisation of the economy, artificial intelligence, energy independence). However, geopolitics remains a significant source of volatility that we continue to monitor.

Equity segment: Against this backdrop of rising markets, the equity segment performed well, outperforming the MSCI World Index. During the month, we increased our exposure to technology stocks as the sector, buoyed by the rally in semiconductor shares, led the market rebound (Micron, Applied Materials, etc.). We continue to invest in real assets by increasing our exposure to the mining (Lundin and Metso) and energy (Maire, Sempra, etc.) segments. We also adjusted our healthcare positions by selling Thermo Fisher and AstraZeneca to establish a position in Gilead, which specialises in HIV treatment. In terms of sales, we trimmed certain positions following the market rally (Microsoft, and particularly in industry, Prysmian and Hubbell).

Credit segment: The market rebound seen in April also benefited the credit market, with spreads tightening throughout the month. The riskiest segments (highest beta) delivered the best performance. Against this backdrop, the credit segment outperformed its benchmark index. Allocation choices contributed positively overall, in particular the overweighting of BBB-rated issuers, exposure to High Yield bonds and subordinated instruments. Conversely, some relative positions weighed on performance, notably the lack of exposure to the energy sector and the underexposure to cyclical stocks. Although activity on the primary market was more subdued over the month, we seized a few opportunities. Accordingly, the portfolio took a position in the FiberCop 5.375% 2031 bond issue. FiberCop is a telecoms infrastructure operator in Italy, operating the main fixed-line network (copper and fibre) and mainly providing wholesale services. The model is based on a gradual transition to fibre (FTTH), with expected structural gains in network energy efficiency.

ESG performance indicators definition

Carbon intensity

Carbon intensity corresponds to the weighted average of greenhouse gas (GHG) emissions per million euro of turnover of the issuers invested in.

Scope 1, 2 and 3 upstream emissions are taken into account.

Scope 1 emissions correspond to emissions directly emitted by the company, while scope 2 emissions correspond to indirect emissions linked to its energy consumption. Upstream scope 3 emissions are all other indirect emissions generated upstream of the production activity.
