Fund manager's report

Source : Groupama AM

May saw a partial easing of geopolitical tensions, although no genuine, lasting agreement has yet been reached. As a result, markets fluctuated between tactical relief and continued caution, in an environment where news events had a greater impact on asset prices than economic figures. This fluctuation kept rates highly volatile, but also allowed Investment Grade credit to maintain a positive bias, supported by continued strong technical flows. At the start of the month, Donald Trump reignited protectionist concerns by announcing a 25% increase in tariffs on European cars, up from the 15% agreed in last year's deal, arguing that the European Union was not fully complying with its terms. In the UK, the local elections weakened Keir Starmer and reignited doubts about political stability. In a market already sensitive to budgetary and inflationary concerns, this situation put further pressure on UK yields. The 10-year gilt rose to 5.18%, its highest level since 2007, highlighting the British bond market's significant vulnerability in times of political uncertainty. In the US, macroeconomic figures continued to point to a scenario of a gradual slowdown. Inflation remained high, driven in particular by energy prices, rents and certain everyday consumer goods, while first-quarter GDP growth was revised downwards to 1.6% year-on-year. This combination of subdued economic activity and persistent inflation remained a source of uncertainty about the Federal Reserve's future monetary policy path, reducing visibility on the timing of a potential easing. The meeting between Donald Trump and Xi Jinping painted a picture of diplomatic calm, without resulting in any concrete progress on the main areas of contention. Investors saw this mainly as a short-term boost for risky assets, without questioning the underlying scenario of a fragile and reversible easing of tensions. In the Eurozone, the May composite PMI fell to 47.5, confirming that economic activity remains in contraction. This weak economic climate stands in contrast to inflation, which remains difficult to gauge, prompting the ECB to maintain a cautious stance. Isabel Schnabel's comments served as a reminder that the central bank remains vigilant about the potential impact of geopolitical tensions on supply chains and energy prices, even in a scenario of diplomatic calm. Against this backdrop, government bond yields ended the month on a slightly more positive note, despite their highly volatile movements. The 10-year Bund fell 10bp to around 2.94%, while the US 10-year yield rose slightly to 4.44%. The Italian spread tightened, reflecting the continued demand for carry trade in the Eurozone. In Investment Grade credit, the monthly performance was positive at +0.94%, driven by both tightening risk premiums and continued strong inflows into this asset class. In the money market, spreads on bank issuers tightened by a few basis points, and some of them returned to their pre-crisis levels. The market continues to expect the ECB to hike rates at least twice before the end of the year. Over the month, the Ester remained stable at around 1.93%, while the 3-month Euribor continued to widen by 7bp to end the month at 2.27%.

ESG performance indicators definition

Carbon intensity

Carbon intensity corresponds to the weighted average of greenhouse gas (GHG) emissions per million euro of turnover of the issuers invested in.

Scope 1, 2 and 3 upstream emissions are taken into account.

Scope 1 emissions correspond to emissions directly emitted by the company, while scope 2 emissions correspond to indirect emissions linked to its energy consumption. Upstream scope 3 emissions are all other indirect emissions generated upstream of the production activity.
