Fund manager's report

Markets over the period: April was marked by a strong rally driven by risk appetite in equity markets. Investors looked past geopolitical concerns to focus on a surprisingly robust Q1 earnings season, particularly in the technology sector, driven by AI (S&P 500 +10.5%, Nasdaq +15.3%, Russell 2000 +12.3%, Eurostoxx 50 +6.4%, Stoxx 600 +5.4%, Nikkei +16.1%, MSCI Asia ex-Japan +16.3%). The US 10-year yield stayed high, ending the month at around 4.4%, as did the German Bund at 3%, with both hovering near their highs. Credit spreads tightened sharply, with the X-over ending at 292bp (compared with 353bp last month). Brent crude remained at a high level of \$114 per barrel. Gold was relatively stable in April, settling at \$4,617, while the US dollar depreciated to 1.17 (compared with 1.15 last month).

Convertibles universe: The Refinitiv Eurozone Euro Only Currency Index rose sharply in April (+3.45%), capturing around 64% of the rise in European equities (Stoxx 600 +5.38%), even though its equity exposure is around 40%. European convertibles also outperformed Investment Grade and High Yield credit, with the ICE BofA Euro IG index up +0.94% and the ICE BofA Euro HY index up +1.94%.

Portfolio and outlook: The fund performed in line with its benchmark this month: the main positive contributions came from our overexposure to STMicro, Schneider, Airbus, etc. Conversely, our underexposure to Aurubis and Nordex weighed on performance, as did our overexposure to Qiagen. The convertibles segment contributed positively as a result of the rebound in BNP, Air Liquide, etc. Equity hedges made a slightly negative contribution over the month due to the market rebound. The fund purchased/added to its positions in convex convertibles whose underlying stocks had fallen sharply due to the conflict, such as Webuild 2028, CMA / Air France 2028 and MTU Aero 2033. We also switched from the STM 2027 convertible to the Barclays/STMicro 2031 convertible, as the latter is cheaper in terms of valuation and requires less cash for the same equity exposure. In addition to STMicro, we added the Siltronic convertible to our portfolio, as its technical profile is very attractive. In contrast, we sold/reduced our position in bond-type convertibles such as T Bac / SAP 2030 and Fresenius 2028, and also trimmed certain equity-type convertible bonds such as Eni 2030. Cautious portfolio bias: At the end of the period, the equity exposure was neutral against the benchmark, the fund was under-exposed to credit risk and clearly over-exposed to modified duration. The fund maintains equity hedges against the Eurostoxx 50 index to increase the fund's convexity.

Key ESG performance indicators

ESG performance indicators definition

Carbon intensity

Carbon intensity corresponds to the weighted average of greenhouse gas (GHG) emissions per million euro of turnover of the issuers invested in.

Scope 1, 2 and 3 upstream emissions are taken into account.

Scope 1 emissions correspond to emissions directly emitted by the company, while scope 2 emissions correspond to indirect emissions linked to its energy consumption. Upstream scope 3 emissions are all other indirect emissions generated upstream of the production activity.
