Fund manager's report

Source : Groupama AM

In May, global stock markets saw strong upward momentum. Financial markets benefited from a period of calm on the geopolitical front and massive inflows into the technology sector. Notably, this upturn completely overshadowed the ongoing tightening of financing conditions and the lingering uncertainties in the Middle East, particularly regarding Iran. In geographical terms, Asia and the US tech sector were the real drivers of this upturn. Monthly performance figures clearly illustrate this: the Nikkei jumped 11.9% and the MSCI Asia ex-Japan 11.3%. In the US, the Nasdaq (+8.4%) largely outperformed the S&P 500 (+5.3%) and the Russell 2000 (+4.4%). In Europe, the rise was more moderate for the Eurostoxx50 (+3.9%) and the Stoxx600 (+3.0%). In the bond segment, yields peaked before falling back. The US 10-year Treasury note rose to nearly 4.7% — a significant rise from its 3.94% level at the end of February — before finally ending the month at around 4.4%. The German Bund followed a similar trajectory, hitting 3.2% before falling below the 3% mark. Lastly, in the commodity market, the price of Brent crude fell to \$92 per barrel and the price of gold dropped by 1% (to \$4,540), while the US dollar stabilised at \$1.17. Over the month, the best-performing sectors were IT and materials, while energy and utilities underperformed. The fund performed in line with its benchmark in May. Noteworthy contributors included Micron, buoyed by a significant improvement in the long-term outlook for AI-specific memory, as well as Palo Alto Networks and Murata Manufacturing, which were also boosted by IT demand. By contrast, Motorola Solutions and Mitsubishi Heavy Industries underperformed.

ESG performance indicators definition

Carbon intensity

Carbon intensity corresponds to the weighted average of greenhouse gas (GHG) emissions per million euro of turnover of the issuers invested in.

Scope 1, 2 and 3 upstream emissions are taken into account.

Scope 1 emissions correspond to emissions directly emitted by the company, while scope 2 emissions correspond to indirect emissions linked to its energy consumption. Upstream scope 3 emissions are all other indirect emissions generated upstream of the production activity.
