

GROUPAMA EURO FINANCIAL DEBT IC

French mutual fund (FCP)

April 2026

Data as of

30/04/2026

The investment management objective is to achieve an annualized return equal to or greater than that of its performance indicator, which is the index composed of 40% ICE BofA Contingent Capital (Euro hedged) and 60% ICE BofA Euro Financial, after deduction of management fees, over the recommended investment period of more than 4 years. To achieve this, the portfolio manager may use active, discretionary management to invest mainly in bonds issued by financial institutions that meet ESG (Environmental, Social and Governance) criteria.

Total net assets

Main risks related to the portfolio

Credit risk: A possible downgrading of the issuer's credit rating or default may have a negative impact on the share price.

Counterparty risk: This is the risk of a counterparty defaulting on its obligations, which could lead to a fall in net asset value.

Liquidity risk: Liquidity risk arises from the difficulty of finding market counterparties or reasonable prices in certain exceptional market circumstances.

Sustainability risk: an event occurred in the environmental, social or governance field which, if it materialized, could have an actual or potential negative impact on the value of the investment or commitment.

Risk of capital loss: The sub-funds offer no protection or guarantee. Consequently, investors may not be able to recover their initial investment in full.

Use of derivatives: If a sub-fund whose performance is linked to an underlying asset frequently invests in derivatives or securities other than the underlying asset, derivative techniques will be used to link the value of the shares to the performance of the underlying asset. While the prudent use of such derivative techniques may be beneficial, derivatives also involve risks which in some cases may be greater than the risks associated with more traditional instruments. Transaction costs may be associated with the use of such derivatives.

ESG performance indicators definition

Carbon intensity

Carbon intensity corresponds to the weighted average of greenhouse gas (GHG) emissions per million euro of turnover of the issuers invested in.

Scope 1, 2 and 3 upstream emissions are taken into account.

Scope 1 emissions correspond to emissions directly emitted by the company, while scope 2 emissions correspond to indirect emissions linked to its energy consumption. Upstream scope 3 emissions are all other indirect emissions generated upstream of the production activity.

Management constraints

The Fund may invest in issuers with a minimum long-term Investment Grade rating, and up to 20% in high-yield (speculative) or unrated issuers. The proportion of investments in fixed-income products will range from 0 to 110% of net assets. It may invest up to a maximum of 50% of its net assets in Additional Tier1 bonds or contingent convertible bonds (Coco Bonds). The fund may invest up to 50% of its net assets in preferred shares and up to 10% of its net assets in traditional equities. The Fund's equity exposure will not exceed 50% of its net assets.
