Fund manager's report

Source : Groupama AM

Equity markets staged a strong rebound in April, driven by enthusiasm for artificial intelligence, optimism about a resolution to the Middle East conflict, solid macroeconomic figures and strong first-quarter earnings. As risk appetite returned, the fund outperformed its benchmark.

Among the main contributors to the performance was Maire (engineering and construction for energy and petrochemical projects, +23%), which benefited from the relief brought by the announcement of a ceasefire in a region that is key to its business. Quarterly earnings were also impressive: the group reported an 8% year-on-year increase in revenues, a 50-basis-point improvement in the operating margin, and order intake of €4.8 billion in the first quarter alone — accompanied by reassuring statements about the execution risk of its projects in the Middle East. ASM International (advanced semiconductor deposition equipment, up 30%) also performed well in the first quarter, with revenues growing 16% year-on-year. The company expects growth to accelerate to +19% in the second quarter, driven by robust customer demand in the logic and foundry sectors for advanced nodes; this momentum is itself fuelled by massive investment in artificial intelligence infrastructure, including data centres, accelerators and high-performance computing.

The main negative contributor was the healthcare sector. Eurofins (laboratory testing and analysis, -5%) fell short of expectations with organic growth of just +2.6% in the first quarter. The extreme weather conditions at the start of the year in Europe and North America had a negative impact on testing activity; the termination of unprofitable contracts in diagnostics also contributed to the slowdown. Nevertheless, the company remains confident that it will make up for lost ground over the coming quarters, expected to have a favourable impact on margins. bioMérieux (in vitro diagnostics, -21%), meanwhile, reported disappointing organic growth of -3.9% in the first quarter. Beyond the usual seasonal fluctuations in the respiratory segment, environmental damage in China and the sharp fall in instrument sales — against a backdrop of increased caution on the part of hospitals and laboratories in response to geopolitical and macroeconomic uncertainties — caused concern among investors.

ESG performance indicators definition

Carbon intensity

Carbon intensity corresponds to the weighted average of greenhouse gas (GHG) emissions per million euro of turnover of the issuers invested in.

Scope 1, 2 and 3 upstream emissions are taken into account.

Scope 1 emissions correspond to emissions directly emitted by the company, while scope 2 emissions correspond to indirect emissions linked to its energy consumption. Upstream scope 3 emissions are all other indirect emissions generated upstream of the production activity.
